Hay Fever Treatment

How can we help

This treatment helps to control and prevent the symptoms of hay fever by stopping the release of a nerve transmitter that stimulates the secretion of fluid.

The solution is administered into each nostril by one of our experienced nurse injectors using a nasal spray. The toxin is absorbed by the mucus membranes inside the nose without the need for needles, meaning the treatment is completely pain free!

How many treatments will I need?

We recommend once a year at the beginning of hay fever season. The treatment may relieve symptoms such as nasal congestion, runny nose, sneezing and loss of smell for at least 2 months, but often longer. A second dose may be required 4 weeks after the initial dose.

What are the potential side effects?

A possible temporary side effect is nasal dryness. This will be explained to you in more detail during your consultation.

When will I notice the treatment working?

Full effects of the treatment will be seen after 14 days.

What is the cost?

The total cost for this treatment is \$200. Consultations with our nurses are complimentary, and are a great way to determine if this treatment is a suitable option for you.

Did you know?

Adelaide Plastic Surgery is now offering a safe and effective way of relieving persistent hay fever symptoms.

This innovative treatment utilises the same toxin administered in wrinkle reducing treatments, and reduces the need for hay fever medication.
